Q1. Write a program to check whether a number is prime or not.

Code:-

```
#include <iostream>
using namespace std;

int prime(int num) {
   if (num <= 1) {
      cout << "No is not prime" << endl;
      return 0;
   }
   for (int i = 2; i <=num/2; i++) {
      if (num % i == 0) {
         cout << "No is not prime" << endl;
         return 0;
      }
   }
   cout << "No is prime" << endl;
}

int main() {
   int num;
   cout << "Enter the no.\n";
   cin >> num;
   prime(num);

   return 0;
}
